Manual Testing on live Application

1. Explore the side and find the defect in this web side
   DEMOQA

2. Test Case Writing:
   Write 5 test cases for the job application form. Include scenarios such as:
   o Valid input for all fields.
   o Leaving mandatory fields blank.
   o Invalid email format.
   o File upload functionality.
   o Form submission without agreeing to terms and conditions.

Use the format below:

Test Case ID	Test Scenario	Steps to Execute	Expected Result	Pass/Fail
TC001	Valid form submission	1. Fill in all valid data. 2. Submit form.	Success message displayed	

3. Bug Identification and Reporting:
   o Find and document 3 bugs on the portal.
   o Write a bug report for each, including steps to reproduce, severity, and priority.

Part 2: Basic Test Automation Task

Scenario:

Automate the testing of the job application form from Part 1.

Instructions:

1. Use Selenium WebDriver or any automation tool you are familiar with.
2. Automate the following test scenarios:
   o Valid form submission with all correct inputs.
   o Form submission with mandatory fields left blank.
   o Invalid email format validation.

Requirements:

• Use any programming language (e.g., Python, Java).
• Include assertions to verify expected vs. actual results.
• Generate a simple test execution report.
